

LOOM WALKTHROUGH SCRIPT · ~3 MINUTES

Best Kept Secret — Prototype Demo

Mobile-first player & discovery concept · Record on phone · One take

BEAT 1 — OPEN (SIDE BY SIDE)

Both apps open on your phone. Current app on left, prototype on right.

"After our call I couldn't stop thinking about the product, so I built a quick prototype in your stack — Next.js, Tailwind, on Vercel. Left is the current app on mobile, right is the prototype."

BEAT 2 — HOME SCREEN

Show the prototype home: bottom tab nav, warm artwork, Continue Listening rail.

"First thing — it's mobile-first. Bottom tab navigation, distinct artwork per story, and a Continue Listening rail, because for an audio product resume is table-stakes for retention."

BEAT 3 — START PLAYBACK

Tap the "Ours" card in Continue Listening. Mini-player appears.

"Playback starts, and here's the piece the current app is missing — a persistent mini-player."

BEAT 4 — THE ROUTE-CHANGE MOMENT (KEY BEAT)

Tap Browse in the tab bar. LET THE PROGRESS NUMBER VISIBLY TICK before you speak.

"I'll start a story here on Home... now watch the player as I move to Browse — it keeps advancing, doesn't skip, doesn't reload. The player lives above the routing layer, so you can explore the whole app while you listen. That's the foundation a real audio product needs — and the piece the current site is missing."

BEAT 5 — EXPAND THE PLAYER

Expand to full screen. Show scrubber, skip ±15/30, speed, and the sleep timer fade.

"Full-screen view — scrubber, skip 15 and 30, playback speed, and a sleep timer with a fade-out. That one's deliberate: it ties straight to your Sleep Aids category."

BEAT 6 — CLOSE ON ARCHITECTURE (~20 SEC)

Calm, confident. This is the CTO framing.

"This is a hypothesis, not a critique — it's in your exact stack, so it maps to production. The resume points would persist through an events endpoint, which is also where the clean funnel data the growth work needs starts. I'd love to pressure-test it against your real priorities."

On-camera rules

Navigate **ONLY** by tapping in-app — never reload or type a URL (a hard refresh stops playback).

Let the progress number visibly move before saying "keeps advancing."

Don't tap tabs that dead-end — Browse is real; the rest route to Home.

Keep it under 3 minutes. One confident take beats an over-produced one.

Confirm the Vercel deploy is green and audio plays on the real phone first.
